

1. Rewrite the code inside the Green boxes with JS instead of JSX

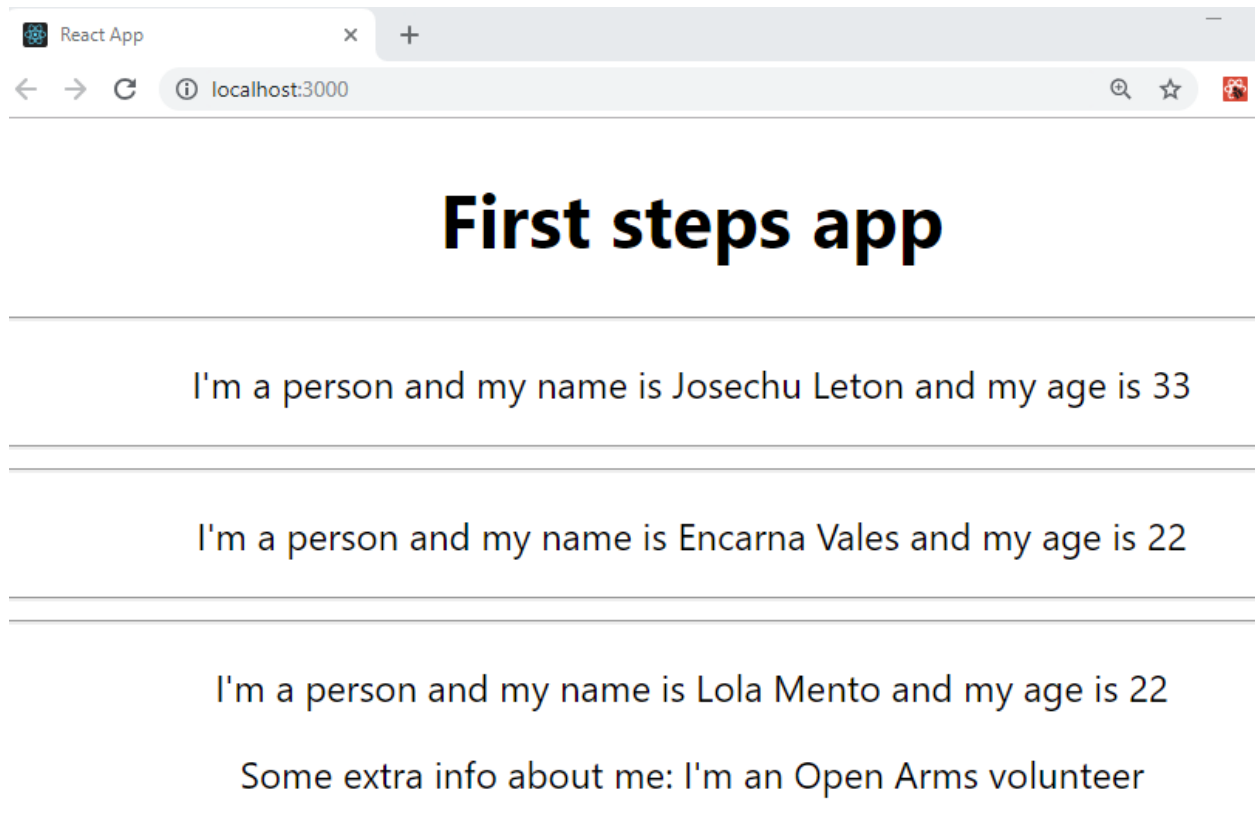

```

index.js
4   import './style.css';
5
6   function Hello(props){
7     return <h2>Afayaivos a React</h2>
8   }
9
10  class App extends Component {
11    constructor() {
12      super();
13      this.state = {
14        name: 'React'
15      };
16    }
17    render() {
18      return (
19        <div>
20          <h1>React first steps</h1>
21          <Hello/>
22        </div>
23      );
24    }
25  }

```

Solved in React_00_intro

2. create first steps app, type function app and create Person.js (solved in React_01_react_app)

```
import React from 'react';
import './App.css';
import Person from './Person';

function App() {
  return (
    <div className="App">
      <!--playground-->
      <h1>First steps app</h1>
      <Person name='Josechu Leton' age='33' />
      <Person name='Encarna Vales' age='22' />
      <Person name='Lola Mento' age='22' >I`m an Open Arms volunteer</Person>
    </div>
  );
}

export default App;
```
